

Out-of-town patient scheduling policy:

To insure effectiveness of treatment, we have a **minimum scheduling requirement** for all out of town patients: Please plan on scheduling your appointments on **4 consecutive days, twice a day.**

The minimum required 4 days will allow us the time needed to start the process of getting a patient into initial adjustment. Follow up is needed after the initial 4 days, however, an individualized treatment plan will be determined at that time, based upon how well the initial adjustment holds. Treatment plans are unique to each patient; some cases may be similar, but because each person is unique, so too is the individual response to treatment.

How well the initial adjustment holds is the result of how severe the problem is, what type of treatment has already been experienced, and how well the correction is taken care of, after the patient gets into initial adjustment.

Please keep in mind that the healing process takes time.
